Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions.

The healing power of maggots is not new. Human beings have discovered it several times. The Maya are said to have used maggots for therapeutic purposes a thousand years ago. As early as the sixteenth century, European doctors noticed that soldiers with maggot-infested wounds healed well. More recently, doctors have realized that maggots can be cheaper and more effective than drugs in some respects, and these squirming larvae have, at times, enjoyed a quiet medical **renaissance**. The problem may have more to do with the weak stomachs of those using them than with good science. The modern heyday of maggot therapy began during World War I, when an American doctor named William Baer was shocked to notice that two soldiers who had lain on a battlefield for a week while their abdominal wounds became infested with thousands of maggots, had recovered better than wounded men treated in the military hospital. After the war, Baer proved to the medical establishment that maggots could cure some of the toughest infections.

In the 1930s hundreds of hospitals used maggot therapy. Maggot therapy requires the right kind of larvae. Only the maggots of blowflies (a family that includes common bluebottles and greenbottles) will do the job; they **devour** dead tissue, whether in an open wound or in a corpse. Some other maggots, on the other hand, such as those of the screw-worm eat live tissue. They must be avoided. When blowfly eggs hatch in a patient's wound, the maggots eat the dead flesh where gangrene-causing bacteria **thrive**. They also excrete compounds that are lethal to bacteria they don't happen to swallow. Meanwhile, they ignore live flesh, and in fact, give it a gentle growth-stimulating massage simply by crawling over it. When they **metamorphose** into flies, they leave without a trace – although in the process, they might upset the hospital staff as **they** squirm around in a live patient. When sulfa drugs, the first antibiotics, emerged around the time of World War II, maggot therapy quickly faded into obscurity.

**Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions.**

In the first half of the nineteenth century, the U.S. government decided that it needed to set up a system for protecting its coastline. It then began building a series of forts along the coast of the eastern part of the country to facilitate its defenses.

The largest of these forts was Fort Jefferson, which was begun in 1846. This fort was built on Garden Key, one of a cluster of small coral islands 70 miles west of Key West. At the time of its construction Fort Jefferson was believed to be of primary strategic importance to the United States because

of its location at the entryway to the Gulf of Mexico. Because of its location at the entrance to a great body of water, it became known as the Gibraltar of the Gulf, in reference to the island located at the mouth of the Mediterranean. The fort itself was a **massive** structure. It was hexagonal in shape, with 8-foot-thick walls, and was surrounded by a medieval-style moat for added security. Covering most of the Garden Key, **it** was approximately half a mile in circumference.

In the latter half of the nineteenth century, during the Civil War and its aftermath, the fort was used as a prison rather than a military installation. The most notorious of its prisoners was Dr. Samuel Mudd, a physician who was the most probably innocently involved in the assassination of Abraham Lincoln. The actual assassin, John Wilkes Booth, broke his leg as he left from the stage of the Ford Theater during the assassination. Dr. Mudd set Booth's broken leg, unaware of Booth's involvement in the assassination. As a result of this action, Dr. Mudd was sentenced to life in prison and remanded to Fort Jefferson. He was pardoned after only four years because of his courageous efforts in combating an epidemic of **yellow fever** that ravaged the fort.

Continuous use of Fort Jefferson ended in the 1870s, although the U.S. Navy continued with sporadic use of it into the twentieth century. Today, the massive ruins still remain on the tiny island that stands guard over the entrance to the gulf, undisturbed except for the occasional sightseer who ventures out from the coast to visit.

It is terrible but we are not (71) \_\_\_\_\_ against crime. The first step towards preventing crime is understanding its (72) \_\_\_\_\_. Most crime is against property, not people, and most crime is not carried out by professionals; nor is it carefully planned. Property crimes (73) \_\_\_\_\_ on the easy opportunity. They are often (74) \_\_\_\_\_ by adolescents and young men, the majority of whom stop offending as they grow older. (75) \_\_\_\_\_ ages for offending are 15 to 18. Also, and not surprisingly, the (76) \_\_\_\_\_ of being a victim of crime (77) \_\_\_\_\_ greatly depending on where you live. This reliance by criminals on the easy opportunity is the key to much crime prevention. Motor cars, for example, are a sitting target for the criminal. Surveys have shown that approximately one in five drivers do not always (78) \_\_\_\_\_ to secure their cars by locking all the doors and shutting all the windows, and in 30 percent of domestic burglaries, the burglar simply walks in without having to use (79) \_\_\_\_\_. If opportunities like these did not exist, criminals would have a much harder time. The chances are that many crimes would not be committed, which would release more police time for (80) \_\_\_\_\_ serious crimes.
